AGRICULTURAL MARKETING SERVICE
MARKETING BULLETIN NO. 61

The MARKET NEWS SERVICE on Fruits, Vegetables, Ornamentals, and Specialty Crops

WHAT IS MARKET NEWS?

Market news is an exchange of information among growers, shippers, wholesalers, and others on supplies, demand, and prices.

This information is gathered by skilled market reporters employed by the U.S. Department of Agriculture together with State agencies. It is flashed throughout the Nation, and is quickly released through telephone recorders, newspapers, radio, television, and in printed reports.

The market news service is part of USDA's Agricultural Marketing Service.

WHAT IT MEANS TO YOU

Market news reporters serve as the eyes and ears of the produce industry. Their reports can help you make your marketing decisions.

Market news tells you about supplies—one of the main things that affect the price you get or the price you pay. The reports also describe the demand for your produce or ornamental crops and tell you what prices are being paid at various market places. They can help you decide whether your prices are right.

KINDS OF MARKET NEWS REPORTS

Terminal market reports on fruits and vegetables are issued from 25 of the largest cities. The reports show both rail and truck receipts in each of these big-city areas. Prices reported in terminal markets are those received by wholesalers for sales of less than a carload or truckload. Sales of full carloads also are reported wherever they are important.

Ornamental crop reports are issued for San Francisco, Boston, Chicago, Milwaukee, Dallas, Honolulu, and Minneapolis. Prices reported are wholesale prices paid by retailers per unit (per bunch, flower, dozen, etc.). No reports are made on volume of arrivals of ornamental crops at terminal markets.

Shipping point reports are issued for the major growing areas for fruits and vegetables. These reports show both rail and truck shipments. Prices are reported by type of sale and show what the grower or shipper receives for the produce in carload or truckload quantities, including mixed loads.

For ornamental crops, shipping point reports are issued for production areas in New England, Florida, California, New Jersey, North Carolina, and Illinois. Prices are reported by type of sale and show what prices the grower or shipper receives per unit. Shipments of many major ornamental crops are reported from production areas in Florida, New Jersey, North Carolina, and Illinois. Data on volume of imports of flowers are collected and released weekly from Washington. This information is included in shipping point and terminal market reports.

A marketing summary or review is prepared after the shipping season for each shipping point production area. These summaries include data on production, supply, prices at both shipping point and selected terminal markets, and related information. A summary of fruit and vegetable prices is published annually for each terminal market. These annual summaries show prices for the most representative trading day, by weeks, in each city. Major commodities are reported by grade, container, and state of origin.

National Shipping Point Trends for fruits and vegetables is a report mailed each Wednesday from the Philadelphia, Kansas City, and Denver terminal market news offices. This weekly report gives background information at the various shipping points on such things as shipments, prices, trading during the past week, crop conditions, harvesting progress, and outlook for the next 2 weeks.

Ornamental Crops National Market Trends is a similar report published each Friday at the San Francisco terminal market news. In addition to the kinds of information described above for the *National Shipping Point Trends,* this report includes observations of reporters covering terminal wholesale flower markets.

Reports issued from Washington, D.C. include weekly and annual transportation reports (rail and truck movement for fruit and vegetable commodities), an annual summary of average monthly produce prices in principal areas, a national honey report issued monthly, and a national sugar market report issued monthly.

HOW TO GET MARKET NEWS REPORTS

Telephone recorders at many shipping point and terminal market news offices provide information 24 hours each day. See page 18 for a list of recorder phone numbers and commodities covered.

Many newspapers, several hundred radio stations, and some TV stations carry market news information. Check your area for newspaper coverage and broadcast schedules.

Detailed market news reports are mailed free on request from terminal and shipping point market news offices, as well as from Washington, D.C. Select the reports you need from the list on pages 6 through 18. Write to the offices that issue reports, and state how frequently you need them.

UNDERSTANDING THE MARKET

The price ranges shown in market reports generally cover the high and low prices on fruits

and vegetables or ornamental crops of good quality and condition. Stock of exceptionally fine quality or of poorer than usual quality is covered by quotations outside the principal price range, and is appropriately described.

To use market news reports, the reader must recognize the effect of variety, grade, or quality, size, and condition on price.

QUALITY refers to the physical properties affecting market value, such as color, shape, texture, cleanness, and freedom from defects.

CONDITION refers to factors which may change with time, such as maturity, decay, freezing injury, shriveling, and flabbiness.

QUALITY AND CONDITION are described by the terms:

fine—superior in appearance, color, and other quality factors; better than good.

good—stock which has a high degree of merchantability and a small percentage of defects.

fair—having a somewhat higher percentage of defects than good or a condition which warrants a price reduction when compared to good.

ordinary—a fairly high percentage of defects or a heavy degree of off-condition.

poor—having such a heavy percentage of defects or so badly off-condition that it is salable only to buyers interested chiefly in low prices.

GLOSSARY OF TERMS USED IN FEDERAL-STATE MARKET NEWS REPORTS

The following terms are used in USDA and Federal-State market news reports for fruits, vegetables, ornamentals, and specialty crops.

MARKET—The price or price level at which a commodity is traded.

MARKET ACTIVITY—The pace at which sales are being made.

active—Available supplies (offerings) are readily clearing the market.

moderate—Available supplies (offerings) are clearing the market at a reasonable rate.

slow—Available supplies (offerings) are not readily clearing the market.
inactive—Sales are intermittent with few buyers or sellers.

PRICE TREND—The direction in which prices are moving in relation to trading in the previous reporting period(s).
higher—The majority of sales are at prices measurably higher than the previous trading session.
firm—Prices are tending higher, but not measurably so.
steady—Prices are unchanged from previous trading session.
lower—Prices for most sales are measurably lower than the previous trading session.

SUPPLY/OFFERING—The quantity of a particular item available for current trading.
heavy—When the volume of supplies is above average for the market being reported.
moderate—When the volume of supplies is average for the market being reported.
light—When the volume of supplies is below average for the market being reported.

DEMAND—The desire to possess a commodity coupled with the willingness and ability to pay.
very good—Offerings or supplies are rapidly absorbed.
good—Firm confidence on the part of buyers that general market conditions are good. Trading is more active than normal.
moderate—Average buyer interest and trading.
light—Demand is below average.
very light—Few buyers are interested in trading.

MOSTLY—The majority of sales or volume.

UNDERTONE—Situation or sense of direction in an unsettled (prices not established) market situation.

WHERE TO WRITE FOR TERMINAL MARKET REPORTS

Terminal market reports on fruits, vegetables, ornamentals, and specialty crops are issued daily at the following markets. The listing

includes separate shipping point or ornamental crop reports that are available in addition to the regular terminal market reports.
